

FRAMESAVER® FUSIONFRAME™

**IT'S NOT JUST A COMPOSITE FRAME.
IT'S A FULL INSTALLATION SYSTEM.**

Unlike anything else on the market. Introducing the new FrameSaver® FusionFrame™ solution from Endura Products: A one-of-a-kind alternative to all-composite and all-wood jambs that helps installers overcome common installation challenges, delivering a better install, a flawless finish and maintenance-free, rot-proof performance.

FRAMESAVER® FUSIONFRAME™

Reset your expectations when it comes to the performance and quality of maintenance-free door frames. The FrameSaver® FusionFrame™ is unlike any other composite frame, delivering exactly what you need and want, even if it didn't seem possible before. FusionFrame puts an end to:

BENDING AND BOWING.

Being flexible is great... but when it comes to door frames, you need something that can stand strong, regardless of temperature or install.

DODGING SIDELITE AND HINGED PATIO UNITS.

With a rigid wood core, FusionFrame mulls eliminate concerns with thermal bow while FusionFrame's unique jamb design allows for concealed installation fasteners, even when the sidelite sash blocks access to the rabbet part of the jamb.

SHIMMING, SHIMMING AND SHIMMING SOME MORE.

Composite frames have their benefits, but installing them? Not so great. No one has time to install shims every foot.

AVOIDING STORM DOORS.

Because FusionFrame is more stable in high temperatures, storm doors are a non-issue.

Issues with traditional composite frames are a thing of the past with FusionFrame.

UNLIKE ANY OTHER

DURABILITY MEETS MAINTENANCE-FREE.

Fusing together the benefits of composite and wood-based door frames, FusionFrame delivers the strength and performance you need in one innovative solution.

1. DEFLECTION. MANAGED.

FusionFrame's engineered-wood core stands strong against warping and bowing, delivering the trusted, proven strength of wood-based door frames.

2. STORM AHEAD.

With a durable wood core, FusionFrame jambs and brickmould deliver needed rigidity to support storm door installations, even when the temperature rises.

3. HINGED PATIO DOORS. SIDELITES. IT'S ALL GOOD.

Thanks to its sturdy wood core, FusionFrame mulls stand strong (and straight!) for you. Go ahead. Install a hinged patio, single and/or double sidelite system without fear.

4. NO WICKING. NO ROTTING.

Part of the FrameSaver Rot-Proof Door Frame product line, FusionFrame features a maintenance-free composite bottom that won't wick or rot, wrapped in a composite exterior for lasting, worry-free performance.

A BETTER INSTALL—WITHOUT LIMITATIONS

Let's face it: the real world is far from perfect. Rough opening conditions are no exception. Enter FusionFrame. Built-in installation aids and features mean that FusionFrame isn't just another composite door frame, it's a full installation system designed to help installers overcome common issues and deliver a better install.

1. BRIDGE THE GAP.

Just because the rough opening is out of plumb, or twisted, doesn't mean your door unit has to be. With $\frac{1}{2}$ " of "float", our innovative Brickmould design can be adjusted to fit flush against the opening while covering any gaps between jamb and brickmould.

2. FEWER SHIMS. FEWER HEADACHES.

Gone are the days of shimming every foot or worse to achieve a quality install. FusionFrame's sturdy engineered wood core delivers a strong no-nonsense installation requiring minimal shims.

DOOR FRAME.

3. LEVEL-HEADED HELP.

Installing a door system of any size is a hands-on activity. While FusionFrame can't lend an actual hand, it does feature a built-in bubble level to help you and your team get installation off to a level start.

4. REMOVEABLE JAMB STOP COVER.

FusionFrame's removeable jamb stop cover allows for concealed installation fasteners, which is especially important for sidelite and hinged patio units, as installers lack access to install fasteners behind the weatherstrip. The result is a fully- prefinished, flawless appearance.

5. CONCEALED BRICKMOULD FASTENERS.

Each FusionFrame brickmould option allows for concealed installation fasteners, eliminating fasteners driven directly into the face of the brickmould.

1.
Obtain any jamb width between 4-9/16" and 8-9/16" with two rippable jamb options:
4-9/6" - 6-9/16" jamb and 6-9/16" - 8-9/16" jamb

BUILD WHAT YOU NEED, WITHOUT COMPROMISE.

Life is about choices. And until now, exterior door frames have been too. Opting for composite frames has meant gaining the benefits of prefinished convenience and performance while losing flexibility in the shop to build what you need in an efficient manner. Not so with FusionFrame.

1. RIPPABLE FLEXIBILITY.

In addition to a wide range of sizes and options to meet your needs, FusionFrame is also available in two rippable jamb widths, collectively delivering unlimited jamb depth adjustability between 4-9/16" and 8-9/16" without compromising the finish.

2. THE MULLS YOU NEED.

Not only do FusionFrame mulls offer unmatched strength and stability, but they are also available in a full range of profiles and options to meet your needs. Whether you need standard, Fat Boy, Back-to-Back or Spread mulls – FusionFrame has a solution for you.

3. FINISHING FREEDOM.

FusionFrame is available with a paintable, prefinished white or stainable textured finish, delivering the convenience of a field-ready product or the freedom to finish however you please to meet your needs.

4. CONSISTENT QUALITY. UNPARALLELED SERVICE.

No matter your needs – Endura Products has you covered, with a proven track record of delivering quality products in a consistent, timely manner, manufactured right here in the USA.
